San Jose, CA | (475) 287-9053 | chidgopkarvedant02@gmail.com | linkedin.com/in/vedant-chidgopkar

SUMMARY

Software Engineer with 4+ years building scalable systems across fintech and enterprise platforms from distributed payment microservices to production AI agents using LangChain, LangGraph, and RAG pipelines. Experienced across the full stack with deep expertise in backend and cloud infrastructure on AWS and Azure, working across Java, Python, Spring Boot, and React.

WORK EXPERIENCE

PayPal Software Engineer II · San Jose, CA	April 2025 – Present
- Spearheaded Java/Spring Boot repayment microservices with Oracle persistence and idempotent request handling, processing 10M+ daily transactions across 16 products in 8 countries. - Formulated Spring Batch reconciliation workflows over distributed event streams, synchronizing settlement and compliance systems within 5s SLA. - Fortified distributed repayment services with idempotent event-processing controls using request fingerprinting, audit-trail replay, and failure recovery logic, ensuring exactly-once execution across 15K+ daily transactions and eliminating duplicate payment risk. - Delivered risk-based payment controls enriching 500K+ daily repayment events with customer risk signals, training a Machine Learning fraud-detection model to autonomously flag high-risk customers and trigger payment holds while preserving backward-compatible client-facing API contracts.	
Oxmaint AI Engineer · Sunnyvale, CA	July 2024 – April 2025
- Innovated a production AI support agent in Python using LangChain, LangGraph, and MCP based tool-calling, connecting telemetry data and internal REST APIs to eliminate repetitive support workflows by 30% across a multi-tenant CMMS platform. - Accelerated technician troubleshooting by designing RAG retrieval pipelines with ChromaDB vector search, OpenAI embeddings, Pandas and NumPy data preprocessing, document ingestion, chunking, and metadata filtering, improving retrieval accuracy by 60%. - Deployed a quantized local LLM using PyTorch and Hugging Face Transformers on NVIDIA Jetson Orin Nano, enabling sub-second edge inference for privacy-sensitive operations and eliminating dependency on external AI APIs. - Slashed Azure infrastructure spend by 20% and deployment time by 60% by codifying environments with Terraform, optimizing GitHub Actions pipelines, and caching high-volume read paths with Redis.	
Berkshire Hathaway Software Engineer · San Jose, CA	August 2023 – June 2024
- Constructed full-stack customer portal features using Next.js, TypeScript, and GraphQL, reducing client-side API traffic by 30% through typed data fetching and batched backend requests. - Architected Spring Boot microservices with Spring Security, enforcing JWT-based authentication and role-based authorization across distributed backend service boundaries. - Consolidated containerized applications on AWS EC2 via Docker, standardizing production and staging environments and eliminating configuration-driven deployment failures. - Optimized PostgreSQL query plans and MongoDB aggregation indexes, reducing transaction latency by 35%.	
Logicon Technosolutions Software Engineer · Pune, India	May 2020 – July 2021
- Devised responsive React frontends with reusable component libraries, delivering state-driven UI workflows for 200+ business users across role-segmented portal screens. - Engineered Node.js and Express.js RESTful services, owning service-layer logic, schema migrations, and end-to-end production support. - Overhauled MySQL schemas with targeted indexing and query refactoring, cutting dashboard load times by 50% and improving analytics reporting accuracy. - Streamlined Jenkins and Kubernetes CI/CD pipelines with automated test suites, shortening release cycle time by 40% and lowering defect rates.	
EDUCATION	
M.S. Computer Science , University of New Haven West Haven, CT	Aug 2021 – May 2023
B.E. Computer Engineering , Savitribai Phule Pune University Pune, India	Aug 2016 – May 2020
SKILLS	
Programming Languages: Java, Python, SQL, TypeScript, JavaScript, Node.js	
Backend & Architecture: Spring Boot, Hibernate, Express.js, Microservices, REST APIs, GraphQL, Kafka, Event-Driven Architecture, Distributed Systems, System Design, Scalability, Fault Tolerance, High Availability, Low-Latency Services, Concurrency	
Databases: Oracle, PostgreSQL, MySQL, MongoDB, Redis, Query Optimization, Indexing, Schema Design, Transaction Processing, ACID	
Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Harness, CI/CD, Git	
Observability & AI: Datadog, Splunk, Amazon CloudWatch, Elasticsearch, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), AI Agents, LangChain, LangGraph, Agent Orchestration, Model Context Protocol (MCP), Vector Databases, Prompt Engineering
